Python for Data Science Practical

Practical - III

Roll No. :S040	Name:Aditya Sopte
Class :SY IT	Batch :
Date of Assignment :29-07-2026	Date/Time of Submission :29-07-2026

PART – A: Theory

Python provides built-in modules to work with **date**, **time**, and **calendar**. These modules help programmers display the current date, convert timestamps into readable dates, generate calendars, and compare dates. They are widely used in attendance systems, scheduling applications, event management, and report generation.

1. Working with Date and Time (**datetime** Module)

The `datetime` module provides classes to work with dates and time. It allows us to get the current date and time, format them, and perform calculations.

Syntax:

```
from datetime import datetime
today = datetime.now()
```

Explanation:

- `from datetime import datetime` imports the `datetime` class.
- `datetime.now()` returns the current system date and time.

2. Working with Timestamps (**time** Module)

A timestamp is the number of seconds elapsed since **January 1, 1970 (Unix Epoch)**. The `time` module converts timestamps into a readable date and time.

Syntax:

```
import time
time.ctime(timestamp)
```

Explanation:

- `ctime()` converts a timestamp into a human-readable date and time.

3. Displaying a Calendar (**calendar** Module)

The `calendar` module is used to display monthly and yearly calendars in Python.

Syntax:

```
import calendar
calendar.month(year, month)
```

Explanation:

- `month()` displays the calendar for a given month and year.
- `calendar()` displays the complete calendar for a year.

4. Comparing Two Dates

Python allows comparison of dates using comparison operators or by calculating the difference between dates.

Syntax:

```
date1 > date2
date2 - date1
```

Explanation:

- `>` checks which date is later.
- `-` returns the difference between two dates.

PART – B Questions:

a. Write a python code to print the current date in a different format.

CODE:

A screenshot of a Python IDE window titled 'jfvf.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/idle/jfvf.py (3.14.6)'. The window has a menu bar with 'File', 'Edit', 'Format', 'Run', 'Options', 'Window', and 'Help'. The code editor contains the following Python code:

```
from datetime import datetime

d = datetime.now()

print(d.strftime("%d/%m/%Y"))
print(d.strftime("%d/%B/%Y"))
print(d.strftime("%d-%m-%Y"))
print("Aditya Sopte S040")
```

OUTPUT:

```
29/07/2026
29/July/2026
29-07-2026
Aditya Sopte S040
>>> |
```

b. Write a python code to convert a time stamp to a date stamp.

CODE:

```
jfvf.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/idle/jfvf.py (3.14.6)
File Edit Format Run Options Window Help

import time
t = time.time()

print(t)
print(time.ctime(t))

print("Aditya Sopte S040")
|
```

OUTPUT:

```
1785314240.6404626
Wed Jul 29 14:07:20 2026
Aditya Sopte S040
|
```

c. Write a python code to develop a calendar module.

CODE:

```
jfvf.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/idle/jfvf.py (3.14.6)
File Edit Format Run Options Window Help

import calendar

print(calendar.month(2007, 9))
print("Aditya Sopte S040")
|
```

OUTPUT:

```

===== RESTART
    September 2007
Mo Tu We Th Fr Sa Su
      1  2
 3  4  5  6  7  8  9
10 11 12 13 14 15 16
17 18 19 20 21 22 23
24 25 26 27 28 29 30

Aditya Sopte S040
>>>

```

d. Write a python code to compare two dates.

CODE:

```

jfvf.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/idle/jfvf.py (3.14.6)
File Edit Format Run Options Window Help
from datetime import date

d1 = date(2026,7,29)
d2 = date(2026,9,2)

print(d1>d2)

print(d1<d2)

print(d2-d1)

print("Aditya Sopte S040")

```

OUTPUT:

```

False
True
35 days, 0:00:00
Aditya Sopte S040
\\

```

Curiosity Question:

1. **Why do computers use timestamps instead of storing dates directly?**
2. **How does Python know the current date and time?**
3. **Can Python display the calendar for any year, even 100 years in the future?**
4. **Why is comparing dates important in real-world applications?**
5. **What happens if you compare two dates from different years?**
