Python for Data Science Practical

Practical - I

Roll No. :S040	Name:Aditya Sopte
RClass :SY BSC IT	Batch : B2
Date of Assignment :15-07-2026	Date/Time of Submission :15-07-2026

1a. Write a python code to print your profile.

Code:

```
D.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/data s/D.py (3.14.6)
File Edit Format Run Options Window Help
# Input details from user
name = input("Enter your name: ")
age = input("Enter your age: ")
roll_number = input("Enter your roll number: ")
phone_number = input("Enter your phone number: ")

# Display profile
print("\n----- PROFILE -----")
print("Name          :", name)
print("Age           :", age)
print("Roll Number   :", roll_number)
print("Phone Number  :", phone_number)
```

Output:

```
===== RESTART: C:/Use:
Enter your name: Aditya Sopte
Enter your age: 18
Enter your roll number: S040
Enter your phone number: 1234567898

----- PROFILE -----
Name          : Aditya Sopte
Age           : 18
Roll Number   : S040
Phone Number  : 1234567898
```

1b. write a python code to print addition of two numbers.

Code:

```
*D.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/data s/D.py (3.14.6)*
File Edit Format Run Options Window Help
# Input two numbers from the user
num1 = float(input("Enter first number: "))
num2 = float(input("Enter second number: "))

# Calculate addition
sum = num1 + num2

# Display the result
print("The sum is:", sum)
print("Adity Sopte S040")
```

Output:

```
===== RESTART
Enter first number: 12
Enter second number: 13
The sum is: 25.0
Adity Sopte S040
```

1c. Write a python code to print square root of number.

Code:

```
D.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/data s/D.py (3.14.6)
File Edit Format Run Options Window Help
import math

# Input a number from the user
num = float(input("Enter a number: "))

# Calculate square root
square_root = math.sqrt(num)

# Display the result
print("The square root of", num, "is", square_root)
print("Adity Sopte S040")
```

Output:

```
===== RESTART: C:/U
Enter a number: 49
The square root of 49.0 is 7.0
Adity Sopte S040
```

1d. Write a python code to calculate area of Triangle.

Code:

A screenshot of a Python IDE window titled 'D.py - C:/Users/IT-23/AppData/Local/Programs/Python/Python314/data s/D.py (3.14.6)'. The window has a menu bar with 'File', 'Edit', 'Format', 'Run', 'Options', 'Window', and 'Help'. The code is written in a syntax-highlighted font: red for comments, green for strings, and blue for code. The code prompts the user for the base and height of a triangle, calculates the area using the formula $0.5 \times \text{base} \times \text{height}$, and prints the result along with the user's name 'Adity Sopte S040'.

```
# Input base and height from the user
base = float(input("Enter the base of the triangle: "))
height = float(input("Enter the height of the triangle: "))

# Calculate area
area = 0.5 * base * height

# Display the result
print("The area of the triangle is:", area)
print("Adity Sopte S040")
```

Output:

```
===== RESTART: C:/Users,
Enter the base of the triangle: 5
Enter the height of the triangle: 5
The area of the triangle is: 12.5
Adity Sopte S040
```

1e. Write a python code to swap two variables.

Code:

```
# Input two variables from the user
a = input("Enter first value: ")
b = input("Enter second value: ")

# Swap using a temporary variable
temp = a
a = b
b = temp

# Display the swapped values
print("After swapping:")
print("First value =", a)
print("Second value =", b)|
print("Adity Sopte S040")
```

Output:

```
===== RESTART:
Enter first value: 10
Enter second value: 20
After swapping:
First value = 20
Second value = 10
Adity Sopte S040
```
